

KALERO

BRAND & VISUAL IDENTITY

The visual system in eight pages. Wordmark, color, the tier ladder, and the print rules that keep every filter, carton, and listing looking like the same brand.

The mark.

KALERO has no icon. The wordmark is the mark — six letters, hairline weight, wide tracking. The lightness and the space between letters are the whole idea. It is **vector artwork**, **never type**: place it from the master file, never rebuild it by typing.

KALERO

KALERO

Carbon — primary. The default, on white or near-white.

KALERO

Blue. Light surfaces where it reads as brand, not label.

KALERO

White knockout. Frame rails, spine, black panels.

KALERO

Spectrum — restricted. Large, on white, hero moments only.

Clear space

One full cap height on all four sides. Nothing enters it — no icons, no die lines, no barcodes, no flag.

Minimum size

1.25in / 32mm in print, 140px on screen. The spectrum version needs 1.5in and a white background.

Scaling

Lock the aspect ratio and scale the whole lockup. Never re-track, condense, or stretch to fit a space.

Always

- Place from vector — AI/EPS to print, SVG to web
- Keep the hairline weight; if it's hard to read, go bigger
- Use one of the four colorways, matched to background
- Let the mark stand alone — no descriptor beneath it

Never

- Bold, outline, thicken, or add a shadow
- Substitute a lookalike face — Satoshi Bold is not the logo
- Recolor, reverse, or tier-color the mark
- Place the spectrum version small or on color

One blue. One spectrum.

KALERO Blue is the anchor — it's the color on the physical frame, the one a customer sees every time they change a filter. It is also the opening stop of the spectrum, so the master brand color and the gradient are the same value. There is no second blue in the system.

 KALERO Blue #37B2E6 RGB 55, 178, 230 · CMYK 67, 11, 0, 0 Frames, carton spine, STANDARD tier, brand surfaces.	 Carbon #0B0D10 Pure black #000000 for line art Large dark fills. Pure black keeps hairline logo and icon strokes crisp.	 White #FFFFFF Unprinted stock Not a background — a structural element. White bands separate every zone.
--	---	--

THE SPECTRUM — FIVE STOPS, EVEN QUARTERS

Angle Linear, 0°, left to right. Never vertical, diagonal, or reversed.	Once per surface The full ramp appears once — the size band. Everywhere else uses a two-stop derivative.	Rasterize Rasterize gradients on export to kill banding. 300 dpi minimum over 4in.	Neutrals #F5F8FA mist #E1E7EB line #B4BEC5 inactive #5E6C76 slate
---	---	---	---

The spectrum is a ladder, not a decoration.

Blue is the entry point, lilac the top of the range. Every tier takes its color from a position on this ramp — which is why the direction is fixed and why no stop can be swapped, added, or removed. Retired values: #35B2E6 and #32B3E7. Any asset still holding them gets re-exported.

Three tiers. Three colors.

The whole assortment is three products, and each owns a position on the spectrum. A shopper shouldn't have to decode HVAC terminology to choose — the tier name and the color do the work from across an aisle or in a thumbnail.

 STANDARD #37B2E6 · KALERO Blue Everyday filtration. Dust, pollen, lint, mold. White media.	 PRO #86CCA8 · Mint Pets, allergens, finer particles. Light green media.	 MAX #C1A1CC · Lilac Smoke, smog, bacteria, fine particles. Lilac media.
---	--	--

What changes by tier

- Shield color and MERV numeral
- Pack-count corner triangle
- Filter media color
- Which benefit rows are active vs. Inactive gray

What never changes

- The frame — all blue, every tier, edge to edge
- White header band and wordmark position
- Full spectrum on the size band
- Layout, icon set, and icon order

Name sells. Number proves.

STANDARD, PRO, and MAX are what a shopper compares. The MERV numeral sits above as technical proof. Both always appear together; neither ever appears alone.

Blue reads first.

Even on PRO and MAX, the line must register as KALERO blue before it registers as green or purple. Tier color lives on graphics and media — never on the frame.

One face. One ribbon.

The wordmark is artwork. Everything else — every size callout, every benefit line, every airflow label — is Satoshi, all caps on packaging. The wave is the only illustrative element in the system.

PRIMARY TYPEFACE

Satoshi

Regular Medium **Bold**

All packaging type is uppercase. Sentence case is for web, spec sheets, and documentation only. No italics, no condensed cut, benefit lines break to two lines maximum.

ROLE	WEIGHT	TREATMENT
Nominal size	Bold 700	Caps, tight, white
Actual size pill	Medium 500	Caps, 0.18em
MERV numeral	Bold 700	Centred in shield
Tier name	Medium 500	Caps, 0.05em
Benefit lines	Bold 700	Caps, two lines max
Frame rails	Bold 700	Caps, white knockout
Voice lines	Medium 500	Sentence case, own zone

Placement

Bottom-aligned in the white header band, bleeding off both edges. Never fully inside a frame; the crop implies it continues.

Background

Pure white only. The ribbon is translucent layers that read correctly only when white shows through.

Never

Flip, mirror, recolor, raise the opacity, run type over it, or put it on the filter frame.

TWO PRODUCTION ISSUES

Resolution. The master asset is 2057px wide — 6.9in at 300 dpi. A 16 × 25 carton header band needs roughly 16in. Rebuild as vector or regenerate at 4800px+.

Off-palette hue. Around 80% the ribbon turns indigo #5370CA, which isn't in the palette — the spectrum is at lilac #C1A1CC there. On a printed carton the wave sits directly above the size band, so the two purples won't match. Recolor to the five master stops.

KALERO · BRAND KIT

04 · TYPE & WAVE

What survives two inks.

The frame is the tightest press constraint and the most-seen surface KALERO owns. The brand is built to degrade cleanly: strip it to two inks and it still unmistakably reads as KALERO.

Two inkFallback

Blue + white. Everything knocked out of the rails. No black panel, no gradient, no gray.

Three inkTarget

Black takes the utility content — airflow, date installed — into its own angled wedge.

Full CMYKCarton

Everything unlocks: spectrum size band, the wave, tier color, inactive gray, photographic media.

FRAME SPECIFICATION

Flat size	15.5 × 24.5 in
Rail width	0.75 in, all sides
Blue	#37B2E6
Type	Satoshi Bold, white

Mirrored rails

Top and bottom carry the same content in opposite rotation, as do left and right. A filter lands in a random orientation — the label has to work upside down.

All blue, clean cage

No gradient strip along the bottom, no tier color at any MERV level. The grille is a plain geometric lattice — the repeated-K pattern is retired.

Carton, flyer, and shelf.

The carton is four horizontal zones in a fixed order — the layout never changes between sizes or tiers, only the values inside it. That's what makes a shelf of KALERO read as one product line.

FRONT FLYER — THE FOUR BANDS

- 20%** Brand — wordmark, flag, pack count
- 40%** Size hero — nominal on spectrum, actual size pill
- 25%** Tier — MERV numeral, shield, tier name
- 15%** Benefits — eight rows, four per side

HERO PHOTOGRAPHY

Hero filter straight on, three stacked behind it, level and aligned, black side panels visible, pure white ground. Media color is the only thing that changes by tier. Never warm the lighting — it pushes the blue toward grey-green.

FIX BEFORE PRINT

- 1 · Tier names.** All current flyers read STANDARD. MERV 11 must read PRO, MERV 13 must read MAX.
- 2 · Gray rows on MAX.** Household odors and smoke & smog are grayed on the MERV 13 flyer. At the top tier they should be active, or the ladder shows no reason to trade up.
- 3 · Two carton systems.** The flyer layout and the V3 layout are different designs and can't both ship. Icon set is settled either way — dust, pollen, pet dander, mold, lint, smoke & smog, bacteria, odors.

The cheatsheet.

One page, one screen. Print it, pin it, send it to anyone touching the brand — designer, printer, photographer, or marketplace vendor.

Color

KALERO Blue	#37B2E6
Carbon	#0B0D10
Pure black — line art	#000000
Inactive gray	#B4BEC5
PRO mint	#86CCA8
MAX lilac	#C1A1CC

Spectrum

0%	#37B2E6
25%	#72CBCA
50%	#86CCA8
75%	#C1A1CC
100%	#7E3E98
Angle	Linear 0°

Type

- Wordmark: vector only
- Everything else: Satoshi
- Packaging: Bold 700, caps
- Labels: Medium 500

Sizes

- Wordmark 1.25in / 140px
- Spectrum mark 1.5in, white
- Clear space 1× cap height
- Frame rail 0.75in

Tiers

- MERV 8 · STANDARD · blue
- MERV 11 · PRO · mint
- MERV 13 · MAX · lilac
- Frame stays blue at all three

Always

- Place the wordmark from vector, never retype
- Keep the hairline weight and the tracking
- Full spectrum once per surface
- Gray unavailable rows — never delete them

Never

- Bold, outline, or re-track the wordmark
- Run the spectrum vertically or reversed
- Add a sixth stop or a second blue
- Put tier color on the frame

STILL OPEN

No monogram exists for favicons, app icons, or social avatars. The wordmark's typeface is undocumented, so the mark stays vector-only until it's identified. Carton system — flyer or V3 — is undecided. And the file named MERV 12 holds a MERV 13 carton; rename it before it reaches a printer.
